# HOW TO USE OUR FRAME ON A PROFILE PHOTO

The below steps provide guidance on how to use our frame using Canva. The frame can be found on our National Engineering Day resources page: raeng.org.uk/national-engineering-day-resources

01

Download the transparent frame from our resources library.

02

Open a free photo-editing application like Canva. Size the workspace to 400 x 400px as a minimum. The workspace must be square.

03

Upload your profile picture and frame to the application.

04

Drag the profile picture onto the workspace so it fills the space. Then position the frame on top.

05

Drag the corners of the frame so that the frame is positioned directly over your photo. Download and upload it to your social media profile.
