

Activity sheet 5

Why are cellulose nanofibres and mycelium fibres more sustainable alternatives to oil-derived composite components?

What engineering applications can you think of for each new type of composite reinforcement, based on its properties?

Cellulose nanofibres

Mycelium fibres

Where else might recyclable or bioplastic resins find an application?

Activity sheet 6

List some '**pull**' factors on engineering that might come from customers, the economy or the need to become sustainable.
